CAREER SUMMARY

I am a self-taught Full-Stack developer with over 6 years of experience building scalable and efficient web applications. I view every new experience as an opportunity to learn, and I find learning to be the most enjoyable part of my day-to-day work. On a daily basis, I work with PHP/Laravel and SQL/non-SQL databases, and I also have experience working with multiple technologies, including frontend/iOS/Android/ AR/VR dev. I understand the importance of placing focus on the end goal: delivering a beautiful, functional product to the user/client. When I'm not behind a computer screen, I'm eating out with friends, going on hikes, or on road trips.

WORK EXPERIENCE

Senior Software Developer
Proxify 🇸🇪

May 2023 - Auguest 2023

As a Backend Engineer at Proxify, I took the role to enhancing the performance and functionality of our internal dashboards while collaborating closely with our internal team. With a focus on resolving bugs and optimizing system performance, my contributions significantly improved the overall efficiency of our systems.

Achievements:
- Within a month of joining Proxify, I received recognition in Istanbul for my commitment to continuous improvement and pushing boundaries, being nominated in the "Never Satisfied with the Status Quo" category.

mid-Senior Software Developer
Airbit.com 🇺🇸

Feb 2020 - May 2023

My experience working with this company was very positive, as it had a good mission and culture.
The constant flow of new and challenging ideas led me to expand my knowledge and drive to learn.
Additionally, I was responsible for handling bugs and requests, which would require me to communicate with support to come up with development requirements.

Technologies used:
`PHP (Laravel)` `GraphQL` `SQL (MySQL/PostgresSQL databases)` `Docker / Ansible / Vagrant` `AWS` `GetStream/Recombee and many other services to track and to make the UX better.`

Software Developer
Rwaq.org 🇸🇦

Mar 2019 - Feb 2020

I worked here as part of a team that created a SaaS educational platform used by companies to educate their employees.

Achievements:
- Susccessfully created a multi-tenant architecture and setuped Unit tests for it as well.
- In this project, one of the major challenges was creating a VOD system that converts each new video uploaded to a variety of streaming qualities.

Technologies used:
`PHP (Laravel)` `AWS (Elemental MediaConvert / S3 / Lambda)` `MySQL` `VueJS` `Tailwind CSS`

Lead Developer
Ocular VR 🇪🇸

Jan 2018 - Feb 2019

My experience at OcularVR involved developing apps for VR/AR platforms, as well as their APIs and control panels.

Achievements:
- Successfully deliverd an Augmented Reality project to IKEA Russia and STG Maroc.
- Successfully deliverd a Virtual Reality project to STG Telecom.

Technologies used:
`PHP (Laravel/Lumen)` `C#` `Unity3D Engine` `Unreal Engine` `VueJS/Bootstrap`
